INDEX TO AUTHORS

A

Achaya, K. Thammu. See *Mukherjee, Achaya, Deuel, and Alfin-Slater,* 845

Alexander, H. C., 3rd. See *Mounter, Alexander, Tuck, and Dien,* 867

—. See *Mounter, Tuck, Alexander, and Dien,* 873

Alfin-Slater, Roslyn B. See *Mukherjee, Achaya, Deuel, and Alfin-Slater,* 845

Ames, Bruce N. The biosynthesis of histidine: L-histidinol phosphate phosphatase, 583

Anderson, Ethel I. See *Stekol, Weiss, Anderson, Hsu, and Watjen,* 95

Armstrong, Marvin D. See *Shaw, McMillan, and Armstrong,* 255

Ashmore, James. See *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735

Ashwell, Gilbert, and **Hickman, Jean.** Enzymatic formation of xylulose 5-phosphate from ribose 5-phosphate in spleen, 65

Avigan, Joel. Modification of human serum lipoprotein fractions by lipide extraction, 957

B

Bailey, J. M., and **French, Dexter.** The significance of multiple reactions in enzyme-polymer systems, 1

Ball, Eric G., and **Cooper, Octavia.** Observations on the function of cytochromes *c* and c_1, 755

Barner, Hazel D. See *Cohen and Barner,* 631

Battley, Edwin H. Carbon determination with alkaline persulfate in the Warburg manometer, 237

Bell, Emily J. See *Coniglio and Bell,* 805

Beltz, Richard E., and **Visser, Donald W.** Studies on the action of thymidine analogues, 1035

Bentley, Ronald, and **Thiessen, Clara P.** Biosynthesis of itaconic acid in *Aspergillus terreus*. I. Tracer studies with C^{14}-labeled substrates, 673

— and —. II. Early stages in glucose dissimilation and the role of citrate, 689

— and —. III. The properties and reaction mechanism of *cis*-aconitic acid decarboxylase, 703

Berkowitz, Mordecai E. See *Bernfeld, Donahue, and Berkowitz,* 51

Bernfeld, Peter, Donahue, Virginia M., and **Berkowitz, Mordecai E.** Interaction of human serum β-lipoglobulin with polyanions, 51

Bloch, Konrad. See *Olson, Lindberg, and Bloch,* 941

—. See *Tchen and Bloch,* 921, 931

Blumenthal, Harold J. See *Davidson, Blumenthal, and Roseman,* 125

Bregman, E. See *Hendley, Bregman, and Krahl,* 459

Britton, Barbara B. See *Nakada, Wolfe, and Wick,* 145

Brown, Gene M. Pantothenylcysteine, a precursor of pantetheine in *Lactobacillus helveticus,* 651

Buettner-Janusch, Vina. See *Potter, Schlesinger, Buettner-Janusch, and Thompson,* 381

C

Cahill, George F., Jr. See *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735

Cammarata, Peter S. See *Taborsky, Cammarata, and Fruton,* 103

Carbone, John V. See *Grodsky and Carbone,* 449

Carsiotis, M. See *Siebert, Carsiotis, and Plaut,* 977

Casciano, R. See *Eiber and Danishefsky,* 721

XUM

Chance, Britton. A comparison of the reaction kinetics of adenylic acid and adenosine diphosphate with the respiratory chain, 595

Chang, M. L. Wu, and **Johnson, B. Connor.** Nicotinic acid metabolism. III. C^{14}-Carboxyl-labeled nicotinamide and nicotinic acid in the chick, 799

Chargaff, Erwin. See *Crampton and Chargaff*, 157

Cheldelin, Vernon H. See *Cummins, Cheldelin, and King*, 301

Cochran, Donald G. See *Sacktor and Cochran*, 241

Cohen, Seymour S., and **Barner, Hazel D.** The conversion of 5-methyldeoxycytidine to thymidine *in vitro* and *in vivo*, 631

Colowick, Sidney P. See *Englard and Colowick*, 1047

Coniglio, John G., and **Bell, Emily J.** The effect of antibiotics upon intestinal and hepatic lipogenesis, 805

Conn, Eric E., and **Young, L. C. T.** Oxidative phosphorylation by lupine mitochondria, 23

Connors, P. See *Vitale, Hegsted, Nakamura, and Connors*, 597

Cooper, Octavia. See *Ball and Cooper*, 755

Crampton, Charles F., and **Chargaff, Erwin.** Studies on nucleoproteins. V. Interactions, 157

Crawford, Irving, Kornberg, Arthur, and **Simms, Ernest S.** Conversion of uracil and orotate to uridine 5′-phosphate by enzymes in *Lactobacilli*, 1093

Cummins, Joseph T., Cheldelin, Vernon H., and **King, Tsoo E.** Sorbitol dehydrogenases in *Acetobacter suboxydans*, 301

D

Danishefsky, I. See *Eiber and Danishefsky*, 721

Davidson, Ann G. See *Frantz, Dulit, and Davidson*, 139

Davidson, Eugene A., Blumenthal, Harold J., and **Roseman, Saul.** Glucosamine metabolism. II. Studies on glucosamine 6-phosphate *N*-acetylase, 125

Davidson, J. D. See *Feigelson, Davidson, and Robins*, 993

Deuel, Harry J., Jr. See *Mukherjee, Achaya, Deuel, and Alfin-Slater*, 845

Dickey, John A. See *Hendley, Bregman, and Krahl*, 459

Dien, Lien Tien H. See *Mounter, Alexander, Tuck, and Dien*, 867

—. See *Mounter, Tuck, Alexander, and Dien*, 873

Dituri, Frank, Shaw, Walter, Warms, Jessie V. B., and **Gurin, Samuel.** Lipogenesis in particle-free extracts of rat liver. I. Substrates and cofactor requirements, 407

—. See *Shaw, Dituri, and Gurin*, 417

Doisy, E. A., Jr. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667

Doisy, Edward A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667

Donahue, Virginia M. See *Bernfeld, Donahue, and Berkowitz*, 51

Dorfman, Ralph I. See *Koritz, Péron, and Dorfman*, 643

Dubuc, J. See *Siebert, Dubuc, Warner, and Plaut*, 965

Dulit, Elinor. See *Frantz, Dulit, and Davidson*, 139

E

Eagle, Harry, Oyama, Vance I., Levy, Mina, and **Freeman, Aaron E.** *myo*-Inositol as an essential growth factor for normal and malignant human cells in tissue culture. Plate 1, 191

Eiber, Harold B., and **Danishefsky, I.** The incorporation of S^{35}-sulfate into heparin, 721

Elliott, William H. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667

Elwyn, David, Ashmore, James, Cahill, George F., Jr., Zottu, Sylvia, Welch,

William, and **Hastings, A. Baird.** Serine metabolism in rat liver slices, 735
—. See *Karnovsky, Hauser, and Elwyn,* 881
Englard, Sasha, and **Colowick, Sidney P.** On the mechanism of the aconitase and isocitric dehydrogenase reactions, 1047

F

Feigelson, Philip, Davidson, J. D., and **Robins, Roland K.** Pyrazolopyrimidines as inhibitors and substrates of xanthine oxidase, 993
—. See *Marks and Feigelson,* 1001
Finnegan, Camille. See *Foreman and Finnegan,* 745
Folch, Jordi, Lees, M., and **Sloane Stanley, G. H.** A simple method for the isolation and purification of total lipides from animal tissues, 497
Foreman, Harry, and **Finnegan, Camille.** Effect of ethylenediaminetetraacetic acid on deposition and excretion of certain rare earth elements, 745
Frantz, Ivan D., Jr., Dulit, Elinor, and **Davidson, Ann G.** The state of esterification of the sterols of rat skin, 139
Freeman, Aaron E. See *Eagle, Oyama, Levy, and Freeman,* 191
Freier, Esther F. See *Glick, Freier, and Ochs,* 77
French, Dexter. See *Bailey and French,* 1
Fritzson, Per. The catabolism of C^{14}-labeled uracil, dihydrouracil, and β-ureidopropionic acid in rat liver slices, 223
— and **Pihl, Alexander.** The catabolism of C^{14}-labeled uracil, dihydrouracil, and β-ureidopropionic acid in the intact rat, 229
Fruton, Joseph S. See *Greenbaum and Fruton,* 173
—. See *Mycek and Fruton,* 165
—. See *Taborsky, Cammarata, and Fruton,* 103
Fukushima, David K., and **Gallagher, T. F.** Metabolism of 21-deoxyhydrocortisone-4-C^{14} in man; 17-dehydroxylation, an artifact, 725

G

Gallagher, T. F. See *Fukushima and Gallagher,* 725
Gardiner, Rita C. See *Silverman, Keresztesy, Koval, and Gardiner,* 83
Gehring, Lois B. See *Magasanik, Moyed, and Gehring,* 339
Glick, David, Freier, Esther F., and **Ochs, Mary J.** Studies in histochemistry. XLVII. Microdetermination of magnesium and its histological distribution in the adrenal in various functional states, 77
Goldin, Abraham. See *Kaplan, Goldin, Humphreys, and Stolzenbach,* 365
Goodall, McC., and **Kirshner, Norman.** Biosynthesis of adrenaline and noradrenaline *in vitro,* 213
—. See *Kirshner and Goodall,* 207
Gould, Bernard S., and **Woessner, J. Frederick.** Biosynthesis of collagen. The influence of ascorbic acid on the proline, hydroxyproline, glycine, and collagen content of regenerating guinea pig skin, 289
Graves, John L., and **Vennesland, Birgit.** The stereospecific hydrogen exchange in the dihydroorotic dehydrogenase reaction, 307
Greenbaum, Lowell M., and **Fruton, Joseph S.** Purification and properties of beef spleen cathepsin B, 173
Greenberg, David M. See *Peters and Greenberg,* 329
—. See *Smith and Greenberg,* 317
Grisolia, Santiago. See *Towne, Rodwell, and Grisolia,* 777
—. See *Wallach and Grisolia,* 277
Grodsky, Gerold M., and **Carbone, John V.** The synthesis of bilirubin glucuronide by tissue homogenates, 449
Gurin, Samuel. See *Dituri, Shaw, Warms, and Gurin,* 407
—. See *Shaw, Dituri, and Gurin,* 417
—. See *Whitehouse, Moeksi, and Gurin,* 813

XUM

H

Hanahan, Donald J. See *Uziel and Hanahan*, 789

Hastings, A. Baird. See *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings*, 735

Hauser, George. See *Karnovsky, Hauser, and Elwyn*, 881

Hayaishi, Osamu. See *Katagiri and Hayaishi*, 439

Hegsted, D. Mark. See *Vitale, Hegsted, Nakamura, and Connors*, 597

Hendley, Edith D., Bregman, E., and **Krahl, M. E.** Inhibition of muscle glucose uptake by diabetic rat sera of varying glucose and lipoprotein content, 459

Heppel, Leon A. See *Hurwitz, Heppel, and Horecker*, 525

Hickman, Jean. See *Ashwell and Hickman*, 65

Horecker, B. L. See *Hurwitz, Heppel, and Horecker*, 525

Houck, J. C., and **Pearce, R. H.** A new bovine testicular mucopolysaccharase, 267

Hsia, S. L., Matschiner, John T., Mahowald, Theodore A., Elliott, William H., Doisy, E. A., Jr., Thayer, Sidney A., and **Doisy, Edward A.** Bile acids. VI. The structure and synthesis of Acid II, 667

Hsu, Peng Tung. See *Stekol, Weiss, Anderson, Hsu, and Watjen*, 95

Humphreys, Stewart R. See *Kaplan, Goldin, Humphreys, and Stolzenbach*, 365

Hurwitz, Jerard, Heppel, Leon A., and **Horecker, B. L.** The enzymatic cleavage of adenylic acid to adenine and ribose 5-phosphate, 525

I

Ikawa, Miyoshi. See *Longenecker, Ikawa, and Snell*, 663

J

Jacobson, K. Bruce, and **Kaplan, Nathan O.** A reduced pyridine nucleotide pyrophosphatase, 427

Jacobson, K. Bruce, and **Kaplan, Nathan O.** Pyridine coenzymes of subcellular tissue fractions, 603

Johnson, B. Connor. See *Chang and Johnson*, 799

K

Kaplan, Nathan O., Goldin, Abraham, Humphreys, Stewart R., and **Stolzenbach, Francis E.** Pyridine precursors of mouse liver diphosphopyridine nucleotide, 365

—. See *Jacobson and Kaplan*, 427, 603

Karibian, Doris. See *Rush, Karibian, Karnovsky, and Magasanik*, 891

Karnovsky, Manfred L., Hauser, George, and **Elwyn, David.** The synthesis and metabolism of enantiomorphic forms of glycerol-1-C^{14}, 881

—. See *Rush, Karibian, Karnovsky, and Magasanik*, 891

Katagiri, Masayuki, and **Hayaishi, Osamu.** Enzymatic degradation of β-ketoadipic acid, 439

Kaufman, Seymour. The enzymatic conversion of phenylalanine to tyrosine, 511

Keresztesy, John C. See *Silverman, Keresztesy, Koval, and Gardiner*, 83

Kihara, Hayato, and **Snell, Esmond E.** The enzymatic cleavage of canavanine to *O*-ureidohomoserine and ammonia, 485

King, Tsoo E. See *Cummins, Cheldelin, and King*, 301

Kirshner, Norman. Pathway of noradrenaline formation from dopa, 821

—. See *Goodall and Kirshner*, 213

— and **Goodall, McC.** Separation of adrenaline, noradrenaline, and hydroxytyramine by ion exchange chromatography, 207

Kleiber, Max. See *Schambye, Wood, and Kleiber*, 1011

Koritz, Seymour B., Péron, Fernand G., and **Dorfman, Ralph I.** Influence of adrenocorticotropic hormone on corticoid production and glycine-1-C^{14} in-

corporation into protein by rat adrenals, 643
Korn, Edward D. Inactivation of lipoprotein lipase by heparinase, 827
—. The degradation of heparin by bacterial enzymes. III. A comparison of the degradation of heparin, hyaluronic acid, and chondroitin sulfate, 841
— and **Quigley, Thomas W., Jr.** Lipoprotein lipase of chicken adipose tissue, 833
Kornberg, Arthur. See *Crawford, Kornberg, and Simms*, 1093
—. See *Littauer and Kornberg*, 1077
Koval, George J. See *Silverman, Kereszstesy, Koval, and Gardiner*, 83
Krahl, M. E. See *Hendley, Bregman, and Krahl*, 459
Kuby, Stephen A. See *Noda and Kuby*, 541, 551
Kurahashi, K., Pennington, R. J., and **Utter, M. F.** Nucleotide specificity of oxalacetic carboxylase, 1059

L

Langdon, Robert G. The biosynthesis of fatty acids in rat liver, 615
Lees, M. See *Folch, Lees, and Sloane Stanley*, 497
LePage, G. A. Purine deoxyribonucleotides in rat tumor, 135
Levy, Mina. See *Eagle, Oyama, Levy, and Freeman*, 191
Lifson, Nathan. See *McClintock and Lifson*, 153
Lindberg, M. See *Olson, Lindberg, and Bloch*, 941
Lingjaerde, Per, and **Skaug, Odvar E.** Effect of 5-hydroxytryptamine on the uptake of P^{32} in the rat, 33
Littauer, Uriel Z., and **Kornberg, Arthur.** Reversible synthesis of polyribonucleotides with an enzyme from *Escherichia coli*, 1077
Longenecker, J. B., Ikawa, Miyoshi, and **Snell, Esmond E.** The cleavage of α-methylserine and α-methylolserine by pyridoxal and metal ions, 663

M

Magasanik, Boris, Moyed, H. S., and **Gehring, Lois B.** Enzymes essential for the biosynthesis of nucleic acid guanine; inosine 5′-phosphate dehydrogenase of *Aerobacter aerogenes*, 339
—. See *Moyed and Magasanik*, 351
Magasanik, Boris. See *Rush, Karibian, Karnovsky, and Magasanik*, 891
Mahowald, Theodore A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667
Marinetti, G. V., Witter, Robert F., and **Stotz, Elmer.** The incorporation *in vivo* of P^{32}-labeled orthophosphate into individual phosphatides of rat tissues, 475
Marks, Paul A., and **Feigelson, Philip.** The biosynthesis of nucleic acid ribose and of glycogen glucose in the rat, 1001
Martell, A. E. See *Murphy and Martell*, 37
Matschiner, John T. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667
McCann, William P. The oxidation of ketone bodies by mitochondria from liver and peripheral tissues, 15
McClintock, Ruth, and **Lifson, Nathan.** Applicability of the D_2O^{18} method to the measurement of the total carbon dioxide output of obese mice, 153
McConnell, Kenneth P., and **Wabnitz, C. H.** Studies on the fixation of radioselenium in proteins, 765
McMillan, Armand. See *Shaw, McMillan, and Armstrong*, 255
Meister, Alton. See *Radhakrishnan and Meister*, 559
Moeksi, Helga. See *Whitehouse, Moeksi, and Gurin*, 813
Mounter, L. A., Alexander, H. C., 3rd, Tuck, Kenneth D., and **Dien, Lien Tien H.** The pH dependence and dissociation constants of esterases and proteases treated with diisopropyl fluorophosphate, 867

Mounter, L. A., Tuck, Kenneth D., Alexander, H. C., 3rd, and **Dien, Lien Tien H.** The reactivity of esterases and proteases in the presence of organophosphorus compounds, 873

Moyed, H. S., and **Magasanik, Boris.** Enzymes essential for the biosynthesis of nucleic acid guanine; xanthosine 5′-phosphate aminase of *Aerobacter aerogenes*, 351

—. See *Magasanik, Moyed, and Gehring*, 339

Mukherjee, Supravat, Achaya, K. Thammu, Deuel, Harry J., Jr., and **Alfin-Slater, Roslyn B.** The nature of the lipides in the rat blood, 845

Murphy, C. B., and **Martell, A. E.** Metal chelates of glycine and glycine peptides, 37

Mycek, Mary J., and **Fruton, Joseph S.** Specificity of papain-catalyzed transamidation reactions, 165

N

Nakada, Henry I., Wolfe, Jack B., and **Wick, Arne N.** Degradation of malonic acid by rat tissues, 145

Nakamura, Motoomi. See *Vitale, Hegsted, Nakamura, and Connors*, 597

Noda, Lafayette, and **Kuby, Stephen A.** Adenosinetriphosphate-adenosinemonophosphate transphosphorylase (myokinase). I. Isolation of the crystalline enzyme from rabbit skeletal muscle, 541

— and —. II. Homogeneity measurements and physicochemical properties, 551

O

Ochs, Mary J. See *Glick, Freier, and Ochs*, 77

Olson, J. A., Jr., Lindberg, M., and **Bloch, Konrad.** On the demethylation of lanosterol to cholesterol, 941

Oyama, Vance I. See *Eagle, Oyama, Levy, and Freeman*, 191

P

Parsons, Donald W. See *Koritz, Péron, and Dorfman*, 643

Payinda, H. See *Eiber and Danishefsky*, 721

Pearce, R. H. See *Houck and Pearce*, 267

Peeters, Georges J. See *Wood, Schambye, and Peeters*, 1023

Pennington, R. J. See *Kurahashi, Pennington, and Utter*, 1059

Péron, Fernand G. See *Koritz, Péron, and Dorfman*, 643

Peters, James M., and **Greenberg, David M.** Studies on the conversion of citrovorum factor to a serine aldolase cofactor, 329

Pihl, Alexander. See *Fritzson and Pihl*, 229

Plaut, G. W. E. See *Siebert, Carsiotis, and Plaut*, 977

—. See *Siebert, Dubuc, Warner, and Plaut*, 965

Potter, Richard L., Schlesinger, Sondra, Buettner-Janusch, Vina, and **Thompson, Loleta.** The isolation of pyrimidine deoxyribonucleotides from the acid-soluble extract of thymus, 381

Prusoff, William H. Studies on the mechanism of action of azathymine. III. Relationship between incorporation into deoxypentose nucleic acid and inhibition, 901

Q

Quigley, Thomas W., Jr. See *Korn and Quigley*, 833

R

Radhakrishnan, A. N., and **Meister, Alton.** Conversion of hydroxyproline to pyrrole-2-carboxylic acid, 559

Richert, Dan A. See *Schulman and Richert*, 181

Roberts, D. W. A. The wheat leaf phosphatases. III. A survey of the heat stability of the enzymes active at pH 5.7, 751

Robins, Roland K. See *Feigelson, Davidson, and Robins*, 993

Rodwell, Victor W. See *Towne, Rodwell, and Grisolia*, 777

Roseman, Saul. Glucosamine metabolism. I. *N*-Acetylglucosamine deacetylase, 115
—. See *Davidson, Blumenthal, and Roseman,* 125
Rush, David, Karibian, Doris, Karnovsky, Manfred L., and Magasanik Boris. Pathways of glycerol dissimilation in two strains of *Aerobacter aerogenes:* enzymatic and tracer studies, 891

S

Sacktor, Bertram, and **Cochran, Donald G.** Dephosphorylation of nucleotides by insect flight muscle, 241
Schambye, Per, Wood, Harland G., and **Kleiber, Max.** Lactose synthesis. I. The distribution of C^{14} in lactose of milk after intravenous injection of C^{14} compounds, 1011
—. See *Wood, Schambye, and Peeters,* 1023
Schlesinger, Sondra. See *Potter, Schlesinger, Buettner-Janusch, and Thompson,* 381
Schulman, Martin P., and **Richert, Dan A.** Heme synthesis in vitamin B_6 and pantothenic acid deficiencies, 181
Shack, Joseph. Deoxyribonucleases of mouse tissues, 573
Shaw, Kenneth N. F., McMillan, Armand, and **Armstrong, Marvin D.** The metabolism of 3,4-dihydroxyphenylalanine, 255
Shaw, Walter N., Dituri, Frank, and **Gurin, Samuel.** Lipogenesis in particle-free extracts of rat liver. II. Experimental diabetes, 417
—. See *Dituri, Shaw, Warms, and Gurin,* 407
Shneour, Elie A., and **Zabin, Irving.** On the biosynthetic relationship between lycopene and colorless polyenes in tomatoes, 861
Siebert, Günther, Carsiotis, M., and **Plaut, G. W. E.** The enzymatic properties of isocitric dehydrogenase, 977
—, **Dubuc, J., Warner, Robert C.,** and **Plaut, G. W. E.** The preparation of isocitric dehydrogenase from mammalian heart, 965
Silverman, Milton, Keresztesy, John C., Koval, George J., and **Gardiner, Rita C.** Citrovorum factor and the synthesis of formylglutamic acid, 83
Simms, Ernest S. See *Crawford, Kornberg, and Simms,* 1093
Siu, Patrick. See *Schambye, Wood, and Kleiber,* 1011
—. See *Wood, Schambye, and Peeters,* 1023
Skaug, Odvar E. See *Lingjaerde and Skaug,* 33
Sloane Stanley, G. H. See *Folch, Lees, and Sloane Stanley,* 497
Smith, Marion E., and **Greenberg, David M.** Preparation and properties of partially purified glutamic semialdehyde reductase, 317
Snell, Esmond E. See *Kihara and Snell,* 485
—. See *Longenecker, Ikawa, and Snell,* 663
Stekol, Jakob A., Weiss, Sidney, Anderson, Ethel I., Hsu, Peng Tung, and Watjen, Alice. Vitamin B_{12} and folic acid in relation to methionine synthesis from betaine *in vivo* and *in vitro,* 95
Stolzenbach, Francis E. See *Kaplan, Goldin, Humphreys, and Stolzenbach,* 365
—. See *Van Reen and Stolzenbach,* 373
Stotz, Elmer. See *Marinetti, Witter, and Stotz,* 475
Sutton, W. B. Mechanism of action and crystallization of lactic oxidative decarboxylase from *Mycobacterium phlei,* 395

T

Taborsky, George, Cammarata, Peter S., and **Fruton, Joseph S.** Oxidation of acetaldehydrotyrosine by *Escherichia coli,* 103
Tchen, T. T., and **Bloch, Konrad.** On the conversion of squalene to lanosterol *in vitro,* 921

XUM

Tchen, T. T., and **Bloch, Konrad.** On the mechanism of enzymatic cyclization of squalene, 931
Thayer, Sidney A. See *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy,* 667
Thiers, Ralph E., and **Vallee, Bert L.** Distribution of metals in subcellular fractions of rat liver, 911
Thiessen, Clara P. See *Bentley and Thiessen,* 673, 689, 703
Thompson, Loleta. See *Potter, Schlesinger, Buettner-Janusch, and Thompson,* 381
Towne, Jack C., Rodwell, Victor W., and **Grisolia, Santiago.** The microestimation, distribution, and biosynthesis of 2,3-diphosphoglyceric acid, 777
Tuck, Kenneth D. See *Mounter, Alexander, Tuck, and Dien,* 867
—. See *Mounter, Tuck, Alexander, and Dien,* 873

U

Utter, M. F. See *Kurahashi, Pennington, and Utter,* 1059
Uziel, Mayo, and **Hanahan, Donald J.** An enzyme-catalyzed acyl migration: a lysolecithin migratase, 789

V

Vallee, Bert L. See *Thiers and Vallee,* 911
Van Reen, Robert, and **Stolzenbach, Francis E.** Pyridine derivatives as growth factors in the duckling, 373
Vennesland, Birgit. See *Graves and Vennesland,* 307
Visser, Donald W. See *Beltz and Visser,* 1035
Vitale, J. J., Hegsted, D. Mark, Nakamura, Motoomi, and **Connors, P.** The effect of thyroxine on magnesium requirement, 597

W

Wabnitz, C. H. See *McConnell and Wabnitz,* 765
Wallach, Donald P., and **Grisolia, Santiago.** The purification and properties of hydropyrimidine hydrase, 277
Warms, Jessie V. B. See *Dituri, Shaw, Warms, and Gurin,* 407
Warner, Robert C. See *Siebert, Dubuc, Warner, and Plaut,* 965
Watjen, Alice. See *Stekol, Weiss, Anderson, Hsu, and Watjen,* 95
Weiss, Sidney. See *Stekol, Weiss, Anderson, Hsu, and Watjen,* 95
Welch, William. See *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735
Whitehouse, Michael, Moeksi, Helga, and **Gurin, Samuel.** The synthesis and biological properties of fatty acyl adenylates, 813
Wick, Arne N. See *Nakada, Wolfe, and Wick,* 145
Witter, Robert F. See *Marinetti, Witter, and Stotz,* 475
Woessner, J. Frederick. See *Gould and Woessner,* 289
Wolfe, Jack B. See *Nakada, Wolfe, and Wick,* 145
Wood, Harland G., Schambye, Per, and **Peeters, Georges J.** Lactose synthesis. II. The distribution of C^{14} in lactose of milk from the perfused isolated cow udder, 1023
—. See *Schambye, Wood, and Kleiber,* 1011

Y

Young, L. C. T. See *Conn and Young,* 23

Z

Zabin, Irving. The formation of radioactive lycopene in ripening tomatoes, 851
—. See *Shneour and Zabin,* 861
Zottu, Sylvia. See *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735

INDEX TO SUBJECTS

A

Acetic acid: Ethylenediaminetetra-. *See* Ethylenediaminetetraacetic acid

Acetobacter suboxydans: Sorbitol dehydrogenase, *Cummins, Cheldelin, and King,* 301

Acetylase: De-. *See* Deacetylase

N-, glucosamine 6-phosphate. *See* Glucosamine 6-phosphate acetylase

Acetyldehydrotyrosine: *Escherichia coli,* oxidation, *Taborsky, Cammarata, and Fruton,* 103

Acetylglucosamine: *N*-, deacetylase, metabolism, *Rosenman,* 115

Acid II: *See* Bile acid

Aconitase: Dehydrogenase, isocitric, and, reactions, *Englard and Colowick,* 1047

Aconitic acid decarboxylase: *cis*-, properties and reaction mechanism, *Bentley and Thiessen,* 703

Acyl adenylate(s): Fatty, synthesis and biological properties, *Whitehouse, Moeksi, and Gurin,* 813

Acyl migration: Enzyme-catalyzed, lysolecithin migratase, *Uziel and Hanahan,* 789

Adenine: Adenylic acid, enzymatic cleavage, to ribose 5-phosphate, *Hurwitz, Heppel, and Horecker,* 525

Adenosine diphosphate: Reaction kinetics, respiratory chain, comparison, *Chance,* 595

Adenosinetri- and monophosphate transphosphorylase: Crystalline, muscle, skeletal, isolation, *Noda and Kuby,* 541

Homogeneity, measurements and physicochemical properties, *Noda and Kuby,* 551

Adenylate: Acyl. *See* Acyl adenylate

Adenylic acid: Enzymatic cleavage, to adenine and ribose 5-phosphate, *Hurwitz, Heppel, and Horecker,* 525

Adenylic acid—*continued:*

Reaction kinetics, respiratory chain, comparison, *Chance,* 595

Adipic acid: Keto-. *See* Ketoadipic acid

Adipose tissue: Lipoprotein lipase, *Korn and Quigley,* 833

Adrenal(s): Adrenocorticotropic hormone and corticoid production, and glycine-1-C^{14} incorporation, *Koritz, Péron, and Dorfman,* 643

Adrenaline: Biosynthesis, *in vitro, Goodall and Kirshner,* 213

Nor-. *See* Noradrenaline

Separation, ion exchange chromatography, *Kirshner and Goodall,* 207

Adrenocorticotropic hormone: Production by adrenals, *Koritz, Péron, and Dorfman,* 643

Aerobacter aerogenes: Glycerol dissimilation pathways, *Rush, Karibian, Karnovsky, and Magasanik,* 891

Inosine 5′-phosphate dehydrogenase, *Magasanik, Moyed, and Gehring,* 339

Xanthosine 5′-phosphate aminase, *Moyed and Magasanik,* 351

Aldolase: Serine. *See* Serine aldolase

Aminase: Xanthosine 5′-phosphate. *See* Xanthosine 5′-phosphate aminase

Ammonia: Canavanine, enzymatic cleavage, *Kihara and Snell,* 485

Anion(s): Poly-. *See* Polyanion

Antibiotic(s): Intestinal and hepatic lipogenesis, effect, *Coniglio and Bell,* 805

Ascorbic acid: Skin content, influence, proline, hydroxyproline, glycine, and collagen, *Gould and Woessner,* 289

Aspergillus terreus: Itaconic acid, biosynthesis, *Bentley and Thiessen,* 673, 689, 703

Azathymine: Incorporation into deoxypentose nucleic acid, relation, *Prusoff,* 901

B

Betaine: Methionine synthesis *in vivo* and *in vitro*, vitamin B_{12} and folic acid, relation, *Stekol, Weiss, Anderson, Hsu, and Watjen*, 95

Bile acid(s): Acid II, structure and synthesis, *Hsia, Matschiner, Mahowald, Elliott, Doisy, Thayer, and Doisy*, 667

Bilirubin glucuronide: Tissue homogenates, synthesis, *Grodsky and Carbone*, 449

Blood: Lipides, nature, *Mukherjee, Achaya, Deuel, and Alfin-Slater*, 845

Blood serum: Glucose, muscle glucose uptake, diabetes, relation, *Hendley, Bregman, and Krahl*, 459

Lipoprotein, muscle glucose uptake, diabetes, relation, *Hendley, Bregman, and Krahl*, 459

C

Canavanine: Enzymatic cleavage to *O*-ureidohomoserine and ammonia, *Kihara and Snell*, 485

Cancer: Cells, growth, tissue culture, *myo*-inositol effect, *Eagle, Oyama, Levy, and Freeman*, 191

See also Tumor

Carbon: Determination, alkaline persulfate, use, *Battley*, 237

14-labeled, milk lactose, distribution, *Schambye, Wood, and Kleiber*, 1011

—, — —, —, *Wood, Schambye, and Peeters*, 1023

Carbon dioxide: Total, determination, obesity, $D_{20}O^{18}$ use, *McClintock and Lifson*, 153

Carboxylase: Acotinic acid de-. *See* Acotinic acid decarboxylase

Oxalacetic, nucleotide specificity, *Kurahashi, Pennington, and Utter*, 1059

Carboxylic acid: Pyrrole-2-. *See* Pyrrole-2-carboxylic acid

Cathepsin: B, spleen, purification and properties, *Greenbaum and Fruton*, 173

Cell(s): Normal and malignant, growth, *myo*-inositol effect, *Eagle, Oyama, Levy, and Freeman*, 191

Cholesterol: Lanosterol, demethylation, *Olson, Lindberg, and Bloch*, 941

Chondroitin sulfate: Degradation, comparison, *Korn*, 841

Citrate: Role, itaconic acid biosynthesis, *Bentley and Thiessen*, 689

Citrovorum factor: Formylglutamic acid, synthesis, *Silverman, Keresztesy, Koval, and Gardiner*, 83

Serine aldolase, conversion, *Peters and Greenberg*, 329

Collagen: Biosynthesis, *Gould and Woessner*, 289

Skin content, ascorbic acid, influence, *Gould and Woessner*, 289

Cortisone: Production by adrenals, *Koritz, Péron, and Dorfman*, 643

Cortisone-4-C^{14}: Deoxyhydro-. *See* Deoxyhydrocortisone

Cysteine: Pantothenyl-. *See* Pantothenylcysteine

Cytidine: Methyldeoxy-. *See* Methyldeoxycytidine

Cytochrome: *c*, function, *Ball and Cooper*, 755

c_1, function, *Ball and Cooper*, 755

D

Deacetylase: *N*-Acetylglucosamine, *Roseman*, 115

Decarboxylase: Lactic. *See* Lactic decarboxylase

Dehydrogenase: Dihydroorotic. *See* Dihydroorotic dehydrogenase

Inosine 5′-phosphate. *See* Inosine 5′-phosphate dehydrogenase

Isocitric. *See* Isocitric dehydrogenase

—, aconitase and, reactions, *Englard and Colowick*, 1047

Dehydroxylation: 17-, artifact, *Fukushima and Gallagher*, 725

—, metabolism, *Fukushima and Gallagher*, 725

Deoxyhydrocortisone-4-C^{14}: 21-, metabolism, *Fukushima and Gallagher*, 725

Deoxypentose nucleic acid: Incorporation, azathymine, and inhibition, *Prusoff*, 901

Deoxyribonuclease(s): Tissue, *Shack*, 1

Deoxyribonucleotide(s): Purine, in tumor, *LePage*, 135
Dephosphorylation: Nucleotides, muscle, insect, *Sacktor and Cochran*, 241
Deuterium oxide: Oxygen 18-labeled, carbon dioxide, total, determination, *McClintock and Lifson*, 153
Diabetes: Experimental, lipogenesis, liver, effect, *Shaw, Dituri, and Gurin*, 417
Muscle glucose uptake, blood sera glucose and lipoprotein, relation, *Hendley, Bregman, and Krahl*, 459
Dihydroorotic dehydrogenase: Stereospecific hydrogen, exchange, *Graves and Vennesland*, 307
Dihydrouracil: Carbon 14-labeled, catabolism, *Fritzson and Pihl*, 229
— —, in liver, catabolism, *Fritzson*, 223
Dihydroxyphenylalanine: 3,4-, metabolism, *Shaw, McMillan, and Armstrong*, 255
Diisopropyl fluorophosphate: Esterases and proteases, pH dependence and dissociation constants, effect, *Mounter, Alexander, Tuck, and Dien*, 867
2,3-Diphosphoglyceric acid: Microestimation, distribution, and biosynthesis, *Towne, Rodwell, and Grisolia*, 777
Diphosphopyridine nucleotide: Pyridine precursors, liver, *Kaplan, Goldin, Humphreys, and Stolzenbach*, 365
Dopa: Noradrenaline pathway, *Kirshner*, 821

E

Element(s): Earth, rare, *Foreman and Finnegan*, 745
Enzyme(s): Ketoadipic acid degradation, *Katagiri and Hayaishi*, 439
Nucleic acid guanine biosynthesis, *Magasanik, Moyed, and Gehring*, 339
Moyed and Magasanik, 351
Phenylalanine conversion to tyrosine, *Kaufman*, 511
-Polymer systems, multiple reactions, *Bailey and French*, 1
Enzyme(s)—*continued:*
Properties, isocitric dehydrogenase, *Siebert, Carsiotis, and Plaut*, 977
Pyridine co-. *See* Pyridine coenzyme
Squalene cyclization, *Tchen and Bloch*, 931
Wheat leaf phosphatases, heat stability, survey, *Roberts*, 751
Xylulose 5-phosphate formation, ribose 5-phosphate, spleen, relation, *Ashwell and Hickman*, 65
Enzyme(s): *See also* Acetylase, Aconitase, etc.
Escherichia coli: Acetyldehydrotyrosine, oxidation, *Taborsky, Cammarata, and Fruton*, 103
Polynucleotides, synthesis, reversible, *Littauer and Kornberg*, 1077
Esterase(s): pH dependence and dissociation constants, diisopropyl fluorophosphate, use, *Mounter, Alexander, Tuck, and Dien*, 867
Ethylenediaminetetraacetic acid: Deposition and excretion, rare earth elements, effect, *Foreman and Finnegan*, 745

F

Fatty acid(s): Liver, biosynthesis, *Langdon*, 615
Folic acid: Vitamin B_{12} and, methionine synthesis, betaine, *in vivo* and *in vitro*, relation, *Stekol, Weiss, Anderson, Hsu, and Watjen*, 95
Formylglutamic acid: Citrovorum factor, synthesis, *Silverman, Keresztesy, Koval, and Gardiner*, 83

G

Globulin: Lipo-. *See* Lipoglobulin
Glucosamine: *N*-Acetyl. *See* Acetylglucosamine
Glucosamine 6-phosphate: *N*-Acetylase, metabolism, *Davidson, Blumenthal, and Roseman*, 125
Glucose: Blood serum, muscle glucose uptake, diabetes, relation, *Hendley, Bregman, and Krahl*, 459
Dissimilation, and citrate role, itaconic acid biosynthesis, relation, *Bentley and Thiessen*, 689

Glucose—*continued:*
Glycogen. *See* Glycogen glucose
Uptake, muscle, blood serum glucose and lipoprotein, diabetes, relation, *Hendley, Bregman, and Krahl,* 459
Glucuronide: Bilirubin. *See* Bilirubin glucuronide
Glutamic acid: Formyl-. *See* Formylglutamic acid
Glutamic semialdehyde reductase: Partially purified, preparation and properties, *Smith and Greenberg,* 317
Glutamine: Semialdehyde reductase, partially purified, preparation and properties, *Smith and Greenberg,* 317
Glyceric acid: 2,3-Diphospho-. *See* 2,3-Diphosphoglyceric acid
Glycerol: Dissimilation pathways, *Aerobacter aerogenes,* with enzymatic and tracer studies, *Rush, Karibian, Karnovsky, and Magasanik,* 891
Glycerol-1-C^{14}: Enantiomorphic forms, synthesis and metabolism, *Karnovsky, Hauser, and Elwyn,* 881
Glycine: Metal chelates, *Murphy and Martell,* 37
Glycine: Skin content, ascorbic acid, influence, *Gould and Woessner,* 289
Glycine-1-C^{14}: Incorporation, by adrenals, *Koritz, Péron, and Dorfman,* 643
Glycine peptide(s): Metal chelates, *Murphy and Martell,* 37
Glycogen glucose: Biosynthesis, *Marks and Feigelson,* 1001
Growth: Pyridine, as factor, *Van Reen and Stolzenbach,* 373
Guanine: Nucleic acid, biosynthesis, enzymatic, *Magasanik, Moyed, and Gehring,* 339
— —, —, —, *Moyed and Magasanik,* 351

H

Heart: Mammalian, isocitric dehydrogenase, preparation, *Siebert, Dubuc, Warner, and Plaut,* 965
Heme: Vitamin B_6 and pantothenic acid deficiency, synthesis, *Schulman and Richert,* 181
Heparin: Degradation, bacterial enzymes, comparison, *Korn,* 841
Sulfate, sulfur 35-labeled, incorporation, *Eiber and Danishefsky,* 721
Heparinase: Inactivation, lipoprotein lipase, effect, *Korn,* 827
Histidine: Biosynthesis, *Ames,* 583
Histidinol phosphate phosphatase: L-, *Ames,* 583
Hormone: Adrenocorticotropic. *See* Adrenocorticotropic hormone
Hyaluronic acid: Degradation, comparison, *Korn,* 841
Hydrase: Hydropyrimidine. *See* Hydropyrimidine hydrase
Hydrogen: Stereospecific exchange, dihydroorotic dehydrogenase reaction, *Graves and Vennesland,* 307
Hydrogenase: Isocitric de-. *See* Isocitric dehydrogenase
Hydropyrimidine hydrase: Purification and properties, *Wallach and Grisolia,* 277
Hydroxylation: De-. *See* Dehydroxylation
Hydroxyproline: Pyrrole-2-carboxylic acid, conversion, *Radhakrishnan and Meister,* 559
Skin content, ascorbic acid, influence, *Gould and Woessner,* 289
Hydroxytryptamine: 5-, 32-labeled phosphorus uptake, effect, *Lingjaerde and Skaug,* 33
Hydroxytyramine: Separation, ion exchange chromatography, *Kirshner and Goodall,* 207

I

Inosine 5′-phosphate dehydrogenase: *Aerobacter aerogenes, Magasanik, Moyed, and Gehring,* 339
Inositol: *myo-,* tissue culture growth, effect, *Eagle, Oyama, Levy, and Freeman,* 191
Intestine: Lipogenesis, antibiotics effect, *Coniglio and Bell,* 805

Isocitric dehydrogenase: Enzymatic properties, *Siebert, Carsiotis, and Plaut,* 977
Preparation, mammalian heart, *Siebert, Dubuc, Warner, and Plaut,* 965
Reactions, mechanism, *Englard and Colowick,* 1047
Itaconic acid: *Aspergillus terreus,* biosynthesis, *Bentley and Thiessen,* 673, 689, 703

K

Ketoadipic acid: β-, enzymatic degradation, *Katagiri and Hayaishi,* 439
Ketone bodies: Oxidation, liver mitochondria, *McCann,* 15
Kinetics: Reaction, *Chance,* 595

L

Lactic decarboxylase: Oxidative, *Mycobacterium phlei,* effect, *Sutton,* 395
Lactobacillus: Orotate conversion, to uridine 5′-phosphate, relation, *Crawford, Kornberg, and Simms,* 1093
Uracil conversion, to uridine 5′-phosphate, relation, *Crawford, Kornberg, and Simms,* 1093
Lactobacillus helveticus: Pantothenylcysteine, pantetheine precursor, *Brown,* 651
Lactose: Carbon 14-labeled, distribution in milk, *Wood, Schambye, and Peeters,* 1023
— —, — — milk, after carbon 14 injection, *Schambye, Wood, and Kleiber,* 1011
Synthesis, *Schambye, Wood, and Kleiber,* 1011, 1023
—, *Wood, Schambye, and Peeters,* 1023
Lanosterol: Cholesterol, demethylation, *Olson, Lindberg, and Bloch,* 941
Squalene, conversion, *in vitro, Tchen and Bloch,* 921
Lecithin: Lyso-. *See* Lysolecithin
Lipase: Lipoprotein. *See* Lipoprotein lipase
Lipide(s): Blood, nature, *Mukherjee, Achaya, Deuel, and Alfin-Slater,* 845
Extraction, and lipoprotein, serum, relation, *Avigan,* 957
Total, tissue, isolation and purification, *Folch, Lees, and Sloane Stanley,* 497
Lipogenesis: Intestinal and hepatic, antibiotics, effect, *Coniglio and Bell,* 805
Liver, *Dituri, Shaw, Warms, and Gurin,* 407
—, experimental diabetes effect, *Shaw, Dituri, and Gurin,* 417
Lipoglobulin: β-, serum, polyanions, interaction, *Bernfeld, Donahue, and Berkowitz,* 51
Lipoprotein: Blood serum, muscle glucose uptake, diabetes, relation, *Hendley, Bregman, and Krahl,* 459
Serum, and lipide extraction, relation, *Avigan,* 957
Lipoprotein lipase: Adipose tissue, *Korn and Quigley,* 833
Inactivation, heparinase, effect, *Korn,* 827
Liver: Carbon 14-labeled uracil, dihydrouracil, and β-ureidopropionic acid, catabolism, *Fritzson,* 223
Diphosphopyridine nucleotide, pyridine precursors, *Kaplan, Goldin, Humphreys, and Stolzenbach,* 365
Fatty acids, biosynthesis, *Langdon,* 615
Lipogenesis, *Dituri, Shaw, Warms, and Gurin,* 407
—, antibiotics, effect, *Coniglio and Bell,* 805
Mitochondria, ketone bodies, oxidation, *McCann,* 15
Serine metabolism, *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735
Subcellular fractions, metal distribution, *Thiers and Vallee,* 911
See also Bile acid; Diabetes
Lupine: Mitochondria, phosphorylation, oxidative, *Conn and Young,* 23

Lycopene: Polyenes, colorless, and, in tomatoes, biosynthetic relation, *Shneour and Zabin*, 861
Radioactive, in tomatoes, ripening, *Zabin*, 851
Lysolecithin: Migratase, *Uziel and Hanahan*, 789

M

Magnesium: Determination, micro-, and distribution, histological, in adrenal, effect, *Glick, Freier, and Ochs*, 77
Histochemistry, determination, micro-, *Glick, Freier, and Ochs*, 77
Requirement, thyroxine, effect, *Vitale, Hegsted, Nakamura, and Connors*, 597
Malonic acid: Degradation, by tissues, *Nakada, Wolfe, and Wick*, 145
Metal(s): Liver, subcellular fractions, distribution, *Thiers and Vallee*, 911
Metal chelate(s): Glycine peptides, *Murphy and Martell*, 37
Metal ion(s): α-Methylserine and α-methylolserine cleavage, *Longenecker, Ikawa, and Snell*, 663
Methionine: Betaine synthesis *in vivo* and *in vitro*, vitamin B_{12} and folic acid, relation, *Stekol, Weiss, Anderson, Hsu, and Watjen*, 95
Methyldeoxycytidine: 5-, thymidine, conversion, *in vivo* and *in vitro*, *Cohen and Barner*, 631
Methylolserine: α-, cleavage, by pyridoxal and metal ions, *Longenecker, Ikawa, and Snell*, 663
Methylserine: α-, cleavage, by pyridoxal and metal ions, *Longenecker, Ikawa, and Snell*, 663
Migratase: Lysolecithin, *Uziel and Hanahan*, 789
Mitochondrion: Liver, ketone bodies, oxidation, *McCann*, 15
Lupine, phosphorylation, oxidative, *Conn and Young*, 23
Tissues, peripheral, ketone bodies, oxidation, *McCann*, 15
Mucopolysaccharase: Testicular, *Houck and Pearce*, 267
Muscle: Glucose uptake, blood serum glucose and lipoprotein, diabetes, relation, *Hendley, Bregman, and Krahl*, 459
Insect, flight, nucleotide dephosphorylation, *Sacktor and Cochran*, 241
Skeletal, adenosinetriphosphate-adenosinemonophosphate, crystalline, isolation, *Noda and Kuby*, 541
—, myokinase, crystalline, isolation, *Noda and Kuby*, 541
See also Heart
Mycobacterium phlei: Lactic decarboxylase, oxidative, effect, *Sutton*, 395
Myokinase: Crystalline, muscle, *Noda and Kuby*, 541

N

Nicotinamide: Carbon 14-carboxyl-labeled, metabolism, *Chang and Johnson*, 799
Nicotinic acid: Metabolism, *Chang and Johnson*, 799
Noradrenaline: Biosynthesis, *in vitro*, *Goodall and Kirshner*, 213
Pathway, formation from dopa, *Kirshner*, 821
Separation, ion exchange chromatography, *Kirshner and Goodall*, 207
Nuclease: Deoxyribo-. *See* Deoxyribonuclease
Nucleic acid: Deoxypentose. *See* Deoxypentose nucleic acid
Guanine biosynthesis, enzymatic, *Magasanik, Moyed, and Gehring*, 339
— —, —, *Moyed and Magasanik*, 351
Nucleic acid ribose: Biosynthesis, *Marks and Feigelson*, 1001
Nucleoprotein(s): Interactions, *Crampton and Chargaff*, 157
Nucleotide(s): Deoxyribo-. *See* Deoxyribonucleotide
Diphosphopyridine. *See* Diphosphopyridine nucleotide
Muscle, insect, dephosphorylation, *Sacktor and Cochran*, 241
Oxalacetic carboxylase, specificity, *Kurahashi, Pennington, and Utter*, 1059

Nucleotide(s)—*continued:*
Polyribo-. *See* Polyribonucleotide
Pyrimidine deoxyribo-. *See* Pyrimidine deoxyribonucleotide

O

Organophosphorus compound(s): Esterases and proteases, reactivity, *Mounter, Tuck, Alexander, and Dien,* 873
Orotate: Conversion, uridine 5′-phosphate, by *Lactobacilli, Crawford, Kornberg, and Simms,* 1093
Orthophosphate: Phosphorus 32-labeled, tissue phosphatides, incorporation *in vivo, Marinetti, Witter, and Stotz,* 475
Oxalacetic carboxylase: Nucleotide specificity, *Kurahashi, Pennington, and Utter,* 1059
Oxidase: Xanthine. *See* Xanthine oxidase

P

Pantetheine: Pantothenylcysteine, *Lactobacillus helveticus,* precursor, *Brown,* 651
Pantothenic acid: Vitamin B_6 and, deficiency, heme synthesis, *Schulman and Richert,* 181
Pantothenylcysteine: Pantetheine precursor, *Lactobacillus helveticus, Brown,* 651
Papain: -Catalyzed, transamidation reactions, specificity, *Mycek and Fruton,* 165
Peptide(s): Glycine. *See* Glycine peptide
Persulfate: Alkaline, carbon determination, use, *Battley,* 237
Phenylalanine: Dihydroxy-. *See* Dihydroxyphenylalanine
Tyrosine, enzymatic conversion, *Kaufman,* 511
Phosphatase(s): L-Histidinol phosphate. *See* Histidinol phosphate phosphatase
Pyro-. *See* Pyrophosphatase
Wheat leaf, heat stability of enzymes, *Roberts,* 751
Phosphate: Adenosine di-. *See* Adenosine diphosphate
Diisopropyl fluoro-. *See* Diisopropyl fluorophosphate
Ortho-. *See* Orthophosphate
Ribose 5-. *See* Ribose 5-phosphate
Phosphatide(s): Tissue, orthophosphate phosphorus 32-labeled, incorporation, *Marinetti, Witter, and Stotz,* 475
Phosphorus: 32-labeled, 5-hydroxytryptamine, effect, *Lingjaerde and Skaug,* 33
Phosphorus compound(s): Organo-. *See* Organophosphorus compound
Phosphorylase: Adenosinetri- and monophosphate trans-. *See* Adenosinetri- and monophosphate transphosphorylase
Phosphorylation: Oxidative, mitochondria, lupine, *Conn and Young,* 23
De-. *See* Dephosphorylation
Polyanions: Lipoglobulin, serum interaction, *Bernfeld, Donahue, and Berkowitz,* 51
Polyene(s): Colorless, and lycopene, in tomatoes, biosynthetic relation, *Shneour and Zabin,* 861
Polymer: Enzyme-, systems, multiple reactions, *Bailey and French,* 1
Polynucleotide(s): Synthesis, reversible, with *Escherichia coli, Littauer and Kornberg,* 1077
Proline: Hydroxy-. *See* Hydroxyproline
Skin content, ascorbic acid, influence, *Gould and Woessner,* 289
Propionic acid: β-Ureido-. *See* Ureidopropionic acid
Protease(s): pH dependence and dissociation constants, diisopropyl fluorophosphate, use, *Mounter, Alexander, Tuck, and Dien,* 867
Protein(s): Lipo-. *See* Lipoprotein
Nucleo-. *See* Nucleoprotein
Radioselenium fixation, *McConnell and Wabnitz,* 765
Purine: Deoxyribonucleotides in tumor, *LePage,* 135

Pyrazolopyrimidine(s): Xanthine oxidase, inhibitors and substrates, *Feigelson, Davidson, and Robins,* 993
Pyridine: Diphosphopyridine nucleotide, liver, precursors, *Kaplan, Goldin, Humphreys, and Stolzenbach,* 365
Growth factors in duckling, *Van Reen and Stolzenbach,* 373
Pyridine coenzyme(s): Tissue fractions, subcellular, *Jacobson and Kaplan,* 603
Pyridine nucleotide pyrophosphatase: Reduced, *Jacobson and Kaplan,* 427
Pyridoxal: α-Methylserine and α-methylolserine cleavage, *Longenecker, Ikawa, and Snell,* 663
Pyrimidine: Hydro-. *See* Hydropyrimidine
Pyrazolo-. *See* Pyrazolopyrimidine
Pyrimidine deoxyribonucleotide(s): Thymus, extract, isolation, *Potter, Schlesinger, Buettner-Janusch, and Thompson,* 381
Pyrrole-2-carboxylic acid: Hydroxyproline, conversion, *Radhakrishnan and Meister,* 559

R

Radioselenium: Fixation, in proteins, *McConnell and Wabnitz,* 765
Ribose 5-phosphate: Adenylic acid, enzymatic cleavage, to adenine, *Hurwitz, Heppel, and Horecker,* 525
Xylulose 5-phosphate formation, enzymatic, spleen, relation, *Ashwell and Hickman,* 65

S

Saccharase: Mucopoly-. *See* Mucopolysaccharase
Selenium: Radio-. *See* Radioselenium
Serine: Liver, metabolism, *Elwyn, Ashmore, Cahill, Zottu, Welch, and Hastings,* 735
Methyl-. *See* Methylserine
Methylol-. *See* Methylolserine
O-Ureidohomo-. *See* *O*-Ureidohomoserine
Serine aldolase: Citrovorum, conversion, *Peters and Greenberg,* 329
Skin: Sterols, esterification, state, *Frantz, Dulit, and Davidson,* 139
Skin: *See* Tissue
Sorbitol dehydrogenase(s): *Acetobacter suboxydans, Cummins, Cheldelin, and King,* 301
Spleen: Cathepsin B, purification and properties, *Greenbaum and Fruton,* 173
Ribose 5-phosphate, xylulose 5-phosphate formation, enzymatic, relation, *Ashwell and Hickman,* 65
Squalene: Enzymatic cyclization, mechanism, *Tchen and Bloch,* 931
Lanosterol, conversion, *in vitro, Tchen and Bloch,* 921
Sterol: *See* Cholesterol
Sterol(s): Skin, esterification, state, *Frantz, Dulit, and Davidson,* 139
Sulfate: Chondroitin. *See* Chondroitin sulfate
Per-. *See* Persulfate
Sulfur 35-labeled, incorporation, heparin, *Eiber and Danishefsky,* 721

T

Testicle: Mucopolysaccharase, *Houck and Pearce,* 267
Thymidine: Analogues, action, *Beltz and Visser,* 1035
Methyldeoxycytidine, conversion, *in vivo* and *in vitro, Cohen and Barner,* 631
Thymine: Aza-. *See* Azathymine
Thymus: Extract, pyrimidine nucleotide, isolation, *Potter, Schlesinger, Buettner-Janusch, and Thompson,* 381
Thyroxine: Magnesium requirement, effect, *Vitale, Hegsted, Nakamura, and Connors,* 597
Tissue(s): Fractions, subcellular, pyridine coenzymes, *Jacobson and Kaplan,* 603
Homogenates, synthesis, bilirubin glucuronide, *Grodsky and Carbone,* 449
Lipide isolation and purification, *Folch, Lees, and Sloane Stanley,* 497

Tissue(s)—*continued:*
Malonic acid, degradation, effect, *Nakada, Wolfe, and Wick,* 145
Peripheral, mitochondria, ketone bodies, oxidation, *McCann,* 15
Tissue culture: Cancer cells, growth, *myo*-inositol effect, *Eagle, Oyama, Levy, and Freeman,* 191
Growth, *myo*-inositol effect, *Eagle, Oyama, Levy, and Freeman,* 191
Tomato: Lycopene and polyenes, colorless, relationship, *Shneour and Zabin,* 861
Radioactive lycopene, formation, *Zabin,* 851
Transamidation reaction(s): Papain-catalyzed, specificity, *Mycek and Fruton,* 165
Tryptamine: 5-Hydroxy-. *See* Hydroxytryptamine
Tumor: Purine deoxyribonucleotides, *LePage,* 135
See also Cancer
Tyramine: Hydroxy-. *See* Hydroxytyramine
Tyrosine: Acetyldehydro-. *See* Acetyldehydrotyrosine
Phenylalanine, enzymatic conversion, *Kaufman,* 511

U

Udder: Milk lactose from, carbon 14 distribution, *Wood, Schambye, and Peeters,* 1023
Uracil: Carbon 14-labeled, catabolism, *Fritzson and Pihl,* 229
— —, in liver, catabolism, *Fritzson,* 223
Conversion, uridine 5′-phosphate, by *Lactobacilli, Crawford, Kornberg, and Simms,* 1093
Dihydro-. *See* Dihydrouracil
Ureidohomoserine: *O*-, canavanine, enzymatic cleavage, *Kihara and Snell,* 485
Ureidopropionic acid: β-, carbon 14-labeled, catabolism, *Fritzson and Pihl,* 229
—, — —, in liver, catabolism, *Fritzson,* 223
Uridine 5′-phosphate: Orotate conversion, *Lactobacilli* relation, *Crawford, Kornberg, and Simms,* 1093
Uracil conversion, *Lactobacilli* relation, *Crawford, Kornberg, and Simms,* 1093

V

Vitamin: B_6, and pantothenic acid deficiency, heme synthesis, *Schulman and Richert,* 181
B_{12}, folic acid and, methionine synthesis, betaine, *in vivo* and *in vitro*, relation, *Stekol, Weiss, Anderson, Hsu, and Watjen,* 95

W

Wheat: Leaf, phosphatases, heat stability of enzymes, *Roberts,* 751

X

Xanthine oxidase: Pyrazolopyrimidines, as inhibitors and substrates, *Feigelson, Davidson, and Robins,* 993
Xanthosine 5′-phosphate aminase: *Aerobacter aerogenes, Moyed and Magasanik,* 351
Xylulose 5-phosphate: Formation, enzymatic, ribose 5-phosphate, spleen, relation, *Ashwell and Hickman,* 65
